RE: CERAMI AND BROWNING CONSTRUCTION INC.

To whom it may concern:

I am pleased to write this letter of recommendation for Cerami & Browning Construction, Inc. (CBCI).

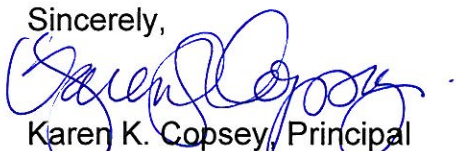

I have worked with CBCI on California school projects ranging from elementary to high school to community college facilities, for more than ten years. I have always found them to be most professional in their business dealings and their work to be of the highest quality.

Notably, CBCI was the successful contractor on two difficult remodels inside the 1927 vintage Shasta Union High School, which was converted to a charter school and Offices for the Shasta Union High School District. Their tasks included retrofit of the existing facility with a new HVAC system and converting several old classrooms into office space for the District. Both were done sensitively and respectfully of the historic structure. Existing materials were carefully restored and brought back to life by CBCI. We worked successfully together through many difficult routings and retrofits to make the modern work blend with the old in a way that was compatible with the existing structure. All this, and they delivered the building within the tight summer break time schedule as well.

CBCI also delivered a challenging remodel and HVAC retrofit for the Student Center at College of the Siskiyous in Weed, CA. This too had to be completed during the summer recess. Many unforeseen difficulties were quickly and professionally dispatched by CBCI. The College is proud of the new look and pleased with the improved functionality.

In closing, let me say I have no hesitation in recommending CBCI for any school construction project and look forward to working with them into the future.

Sincerely,

Karen K. Copsey, Principal  
Nichols, Melburg & Rossetto
